ACCOUNTING

The need for businesses to account for their carbon impact and emissions profile will be integral in delivering the clean economy – as will the need to cost up business cases that deliver sustainability changes.

ENGINEERING

Be an integral team member in the design, redesign and rethinking of processes and systems in advanced manufacturing businesses.

ICT

Being able to contribute ideas and initiatives to design systems and processes and recommend new technologies and digital solutions to contribute to the clean economy transition.

MARKETING

Contribute your ideas and initiatives to promote and communicate to customers and stakeholders how and what a manufacturing business is doing to contribute to the Clean Economy and net zero targets – get the messaging out there!
